

Table of Contents

1. Introduction	1
1.1 Why a new Parking System.....	2
1.2 What is IoT.....	3
1.3 Challenges faced in a Smart Parking System.....	4
1.4 Features of a IoT Based Parking System.....	6
1.5 The Problem	7
1.6 Scope of the Problem	7
1.7 Summary	8
2. Background & Literature Survey	8
2.1 Performance Metrics	8
2.2 State-of-the-art Parking Management Solutions	9
2.3 Challenges	10
2.4 Related Work.....	10
2.4.1 Parking Guidance Information System	10
2.4.2 Transit Based Information System.....	12
2.4.3 Smart Payment System.....	13
2.4.4 E-Parking	14
2.4.5 Automated Parking	15
2.5 Summary	16
3. Proposed Architecture and Solution.....	17
3.1 System Overview.....	17
3.2 System Architecture.....	18
3.2.1 Cloud Based Database.....	18
3.2.2 Local Unit	19
3.2.3 Software Client	19
3.3 Network Architecture.....	20
3.3.1 Parking Network	20
3.3.2 Selection Based on Cost	22
3.4 Working Algorithm.....	23
3.5 Mathematical Model.....	25
3.6 Summary	26
4. Simulation of the ProposedSystem	27
4.1 Introduction.....	27
4.2 Simulation Setup.....	27
4.3 ARENA Simulation Tool.....	31
4.3.1 What is Arena Software.....	31

4.3.2 Working with Arena	31
4.3.3 The Arena Modelling Environment	32
4.3.4 Entities in Arena	33
4.3.5 Modules in Arena.....	33
4.4 Simulation Scenarios.....	42
4.4.1 Animation Based Model.....	42
4.4.2 Entity Based Model	43
4.4.3 Working Method.....	44
4.5 Simulation Results.....	45
4.6 Summary	46
5. Implementation of the System using IoT.....	47
5.1 Hardware Requirements and Specifications.....	47
5.1.1 Infra-Red Sensors	47
5.1.2 Arduino Micro-controller	54
5.1.3 Servo Motors.....	59
5.1.4 Bread Board	62
5.1.5 ESP8266 Wi-Fi Module	65
5.2 System Setup and Working.....	67
5.2.1 Setup.....	67
5.2.2 Working	68
5.3 Summary	69
6. Conclusion and FutureWork	70
